

SMED 8020 - theory only

Genetic Epidemiology

pre-course information and preparations

Document version 2022-05-04

Information regarding SMED8020 spring 2022

Welcome to SMED8020 Genetic Epidemiology 2022.

All teaching will take place on campus at NTNU, and we have chosen Blackboard as the platform to communicate and share course content with you. If any issues arise, please do not hesitate to contact us.

LECTURES

Lectures will be in person. Recorded lectures from previous years will be made available after the in-person lecture to make it easier for you to review them in your own time. We aim to make the lecture notes available a few days prior to the scheduled time to give you time to view them. Questions to the lectures can be asked during the sessions each day and on email and Blackboard.

ASSIGNMENT:

The assignment will be made available on Blackboard on the first day of the course, **Monday 30.05.22**. The assignment must be completed by and presented orally on **Thursday 09.06.22** with a 15 min oral presentation. (Applicable only for those who are taking the course for credits).

PRACTICALS:

Students on this course are not required to attend the practicals. However, the practicals will be available on github for all students. The practical tutoring will be prioritised for students taking the full course and for credits (this year or next).
